### **DETAILED ACTION**

Newly presented claims 71-73 were accidentally omitted from the final action issued on 4/9/2005 and cancelled claim 62 was accidentally included in the rejected claims. This supplemental final action corrects these mistakes.

#### ***Response to Arguments***

1. Applicant's arguments filed 01/24/05 have been fully considered but they are not persuasive. In Fig. 8C of Davids et al., transistor body is labeled as 40.

#### ***Allowable Subject Matter***

2. Claims 1-43, 45-58, 60 and 63-70 allowed.

#### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 44, 59, 61 and 71-73 rejected under 35 U.S.C. 103(a) as being unpatentable over Davids et al. (2003/0161571) in view of Schuppert et al. (5,280,189).

Regarding Claims 44, 59, 61 and 62, Davids et al. disclose an integrated photodevice and waveguide where in Figs. 6A and 10A, layer 12 is silicon layer, on top of silicon layer a germanium layer 18 is located. Cladding layers made up of dielectric material labeled 24 situated to the right and to the left of the germanium layer/silicon layer stack. In Fig.

Art Unit: 2826

10A, conductive plug 60/62 is connected to the germanium layer. Furthermore, in Fig. 8C, transistor body is labeled as 40. Davids fail to disclose the required conductive structures connected to the silicon layer. However, Schuppert et al. disclose semiconductor element with a silicon layer where in Claim 1, plurality of conductive structures disclosed as connected to the silicon layer.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required silicon layer and plurality of contacts to the silicon layer in Davids et al. as taught by Schuppert et al. in order to have a waveguide structure with better performance.

### ***Conclusion***

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
